UBIC's Advanced Forensic Tool Supports Third-Party Investigation

High-Level Analysis Support Solutions Service Delivering Results as Big Data Analysis Grows in Importance

TOKYO, June 24, 2014 (GLOBE NEWSWIRE) -- [UBIC](#), Inc. (Nasdaq:UBIC) (TSE:2158), a leading provider of international litigation support and big-data analysis services, announced today the achievements of its new high-level analysis support solutions service for third-party investigation charged with investigating corporate fraud and other cases of inappropriate practices in Japan. [UBIC](#) is cited by reports issued by two major pharmaceutical manufacturers, Takeda Pharmaceutical Co. Ltd. and Novartis Pharma K.K., whose third-party investigations used UBI C's analysis support solutions, which take advantage of the company's evidentiary document analytics and review platform, Lit i View®.

The investigation results as described in Takeda's third-party investigation report published on June 20 show that the new analysis support service provides an efficient and effective alternative option to the human review of electronic data in e-discovery work.

Usually, third-party investigations which have been set up to investigate a fraud case, for example, would engage a digital forensic service vendor to identify and collect potential evidence from the corporation's electronic data stores and put a team of lawyers to work examining the selected data in more detail. This process requires a great deal of time, manpower and money. [UBIC](#)'s new service can substantially reduce the time, labor and cost of investigation by simplifying and speeding up this process. [UBIC](#) provides investigators with access to an artificial intelligence (AI)-based evidence analysis system, via the cloud, that can perform functions including personal network analysis and Asian-language keyword search very quickly and accurately. [UBIC](#) also provides services to train investigating lawyers to operate the system and to support analysis.

Novartis Pharma K.K.'s third-party investigation report, published on April 2, also includes findings that highlight the excellence of [UBIC](#)'s high-level analysis support solutions service.

These reports highlight the reliability of [UBIC](#)'s solutions service, as well as our technological prowess.

High-level analysis solutions are becoming increasingly essential not only in investigations by third-party investigation but also in criminal investigations by law enforcement authorities. As a pioneer of information analysis solutions using "behavior informatics" - which refers to the science of analyzing electronic data as a collection of thinking and behavior patterns of humans - [UBIC](#) will continue to pursue advancements in R&D and contribute to the creation of a better and safer society.

About [UBIC](#)

[UBIC](#), Inc. (Nasdaq:UBIC) (TSE:2158) is a leading provider of e-discovery and digital forensic services for Asia and the world. [UBIC](#) has extensive experience working with electronically stored information composed in Chinese, Japanese and Korean (CJK) languages and utilizes that expertise for clients involved in cross-border litigation, corporate investigations, intellectual property disputes and much more. At the forefront of e-discovery innovation, [UBIC](#)'s proprietary Lit i View® platform is moving the industry from "fact discovery" to "future discovery" by allowing clients to analyze e-mail messages and digital communications found in big data to reveal patterns in human thought and behavior.
